

Concrete Admixtures and Fiber

EQUICLEAN

Equipment Cleaning Compound

DESCRIPTION

EQUICLEAN is primarily designed for heavy duty cleaning of cement. It contains a specific blend of specially inhibited mineral acids in combination with penetrants and wetting agents. This product will remove the most stubborn stains from cement, no matter what the origin or how old, for it simply bleaches and eats away the top of the cement.

APPLICATION

EQUICLEAN may either be mopped on or sprayed on, though spray equipment should be cleaned immediately afterward if it is susceptible to attack from strong mineral acids.

LIMITATIONS

EQUICLEAN literally reacts with and dissolves cement, therefore, the concentrated material should not be allowed to sit for long periods of time on cement since it may damage it. This product may be diluted as far as 10 parts water and one part chemical, depending on the job that needs to be done. However, before application to a cement floor, driveway, etc., a small test section should be run to determine the time of contact and the concentration necessary to accomplish the desired results.

As with any highly acidic material, proper care should be exercised in the handling of **EQUICLEAN**. Rubber gloves and goggles should be worn when handling the concentrated material. If splashed on skin or clothing wash with water for 10-15 minutes (remove contaminated clothing). If splashed in eyes rinse with copious amounts of water immediately for 15 minutes, and immediately contact a physician. If swallowed, do not induce vomiting, but give large amounts of Milk of Magnesia or egg whites in water and call a physician.
